DETAILED ACTION

Election/Restrictions

Applicant's election of Group I in Paper No. 4 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over European Patent Publication EP 137986 (Kern) in view of Wideman et al, 5,777,012.

Kern teaches a method for improving metal adhesion of brass-plated steel to rubber by applying an adhesion-promoting additive to the surface of the metallic reinforcement elements and contacting the cord with rubber to form a rubber reinforced article as required by claims 1, 7-9 and 10. See abstract. The adhesion promoting composition is applied to the reinforcement by spraying or dipping as required by claim 2. See page 7, lines 19-22. The adhesion promoting composition contains adhesion-promoting additives such as naphthenic oils. See page 7, lines 9-10. Kern does not teach the inclusion of cobalt salt. Wideman teaches at column 4, line 57 through column 5, line 17, that cobalt salts are known in the art to promote adhesion of rubber to

Art Unit: 1774

metal, further teaching the specific cobalt salt compounds contemplated by applicants in claims 3, 5 and 6. This teaching would have provided direction and motivation to the skilled artisan to modify the composition of Kern by including a cobalt salt with the reasonable expectation of enhancing the adhesion of the coated metallic reinforcement to rubber when forming a rubber reinforced article. As to the specific amounts of cobalt contained and deposited, where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum workable ranges by routine experimentation.

As a result, the combined teachings of Kern and Wideman would have rendered obvious the invention as claimed in the present claims.

No claims are allowed.
